EDUCATION

The City College of New York

Bachelor of Engineering, Mechanical Engineering

Manhattan, NY

August 2024 – expected May 2028

EXPERIENCE

Mechanical Design Internship

May 2026 – August 2026

Rifton Equipment

Rifton, NY

- Designed in CAD and fabricated a modular, customizable testing rig to evaluate medical equipment products against industry testing standards
- Built and integrated a pneumatic piston system with a load cell to measure force during product testing
- Wired and configured electronics for pneumatic controls to support automated, repeatable testing cycles, and created wiring diagrams in TinyCAD for future reference

Undergraduate Research Assistant

September 2025 – May 2026

The City College of New York - Professor David Crismond

Manhattan, NY

- Explored neural-network behavior using machine-learning tools including Google Teachable Machine by varying cycle amounts and subjects' appearance
- Worked with a team to analyze training processes, model accuracy, and learning patterns across various AI systems

Manufacturing Internship

June 2025 – August 2025

Community Playthings

Esopus, NY

- Redesigned product packaging and shipping method for a product, reducing packaging costs by 15% through testing and validation
- Gained hands-on exposure to end-to-end manufacturing processes, including assembly, quality inspection, and shipping/logistics workflows
- Collaborated with production team to evaluate and test alternative packaging solutions, balancing cost, protection, and shipping efficiency

Robotics Instructor

September 2024 – May 2025

Play Ideas Robotics

Manhattan, NY

- Led instruction for student cohorts in mechanical design, robotics fundamentals, and control systems, breaking down complex engineering concepts into hands-on, accessible lessons
- Mentored students through the full robot design lifecycle, from CAD modeling to system integration, building their technical confidence and problem-solving skills

PROJECTS

Self Closing Door | Skills: SolidWorks, 3D Printing, Machining

June 2026 – August 2026

- Independently designed and fabricated an automated self-closing door mechanism to address a safety gap, preventing unauthorized entry into a room when a door was accidentally left open
- Modeled the mechanism in SolidWorks and integrated a pneumatic piston, limit switch, relay, and latch system to automatically detect, hold, and close the door within a set period

Reverse Engineering Robotic Dog | Skills: Leadership, Teamwork, Technical Writing

Sept 2025 – May 2026

- Worked with a team to reverse-engineer a robotic dog and develop an improved 3D model using SolidWorks, optimizing the design for performance and durability
- Reduced overall product cost by 10% by sourcing an improved version of the rubber wheels

Baja Racing Club | Member, ASME

Sept 2025 – May 2026

- Designed body panels for the club's competitive Baja racing vehicle

TECHNICAL SKILLS

Languages: Java, Python, C++, MATLAB

Design and Software: SolidWorks, SolidWorks Simulation, Onshape, Fusion 360, Autodesk Inventor, AutoCAD, TinyCAD, DFM, GD&T

Fabrication: 3D printing, Manual Milling, Lathe Operation, Tubing Fabrication

Certifications: Claude Academy Certification, Anthropic (September 2026)

Relevant Coursework: Thermodynamics
